

**Licence to be aware!**

## 8Man – More support and transparency for management of access rights

### Your challenge

Large volumes of data pile up on company servers. Among this unstructured data there is company critical data which demand careful management.

From the smallest adjustment to a major organizational change – it's easy to lose track. Before you notes it there are series of random rather than planned permissions. Your boss, colleagues and even you are asking:

- » **Who's actually accessing which data and why?**
- » **How and through which group membership has an employee gained access rights for a particular directory?**
- » **If we allocate an employee to a different group, which additional access rights will he receive?**
- » **Who had changed particular access rights and when?**
- » **How can I get a quick overview of all access rights and set up regular reporting?**

Questions, that concern most companies. Particularly the heads of IT and administrators.

These questions all illustrate the growing need to manage access rights and their unique features in a much simpler way. Ideally through visual and graphical means. In most cases and even in the smallest IT environments, traditional packages are not always sufficient.

8Man provides optimal support and complete transparency for your access rights management.

In summary: **8Man** makes it possible.

### Your solution

Are you looking for a holistic approach? 8Man offers an integrated system with unexampled user friendliness. The access rights can be presented clearly. 8Man's use of intelligent filters based on group structures can be relied upon. Run scenarios that show you, which user has access on what. Setting your own individual selection allows you to get an optimal view of the results.

Analysis becomes child's play taking only seconds. 8Man builds on your existing structures presenting further recommendations - saving you the problems with changing established processes or introducing of new ones.

8Man can be simply integrated in your company. And in comparison to an identity management (IDM) solution much faster. You even can use 8Man to improve IDM projects structurally.

8Man establishes individual user and group access rights based on company requirements. With 8Man your access right analysis becomes child's play.

## 8Man – Access rights presented simply and quickly within the correct context

### ✓ Clear presentation

Experience the structure of your Active Directory from a completely different perspective. 8Man shows you how your groups are assembled and which users belong to which groups – all presented in a clear overview format.

### ✓ Individual display

8Man shows each user and their access rights within the directories. Multiple rights and different ways for a user to obtain rights are also easy to see.

### ✓ Critical analysis

8Man is instrumental in finding errors in the configuration and discovering any potential weaknesses. It shows you loops in the group structures enabling you to avoid multiple and concurrent access rights.

### ✓ Attractive pricing structure

8Man is affordable. You may be surprised just how reasonable it can be to experience the benefits of this type of access rights management.

**www.protected-networks.com**

### ✓ Absolute visibility

All user accessible directories are displayed. Both single legitimations and multiple access right paths to the same directory are shown as well as the type of access right.

### ✓ Direct comparison

8Man compares the access rights of users and directories allowing you to identify any differences between them with the option to then align them.

### ✓ Comprehensive export facility

Analyzed data can be exported to and reused in other applications or via reports. 8Man provides you with extensive possibilities to export the requested data.

### ✓ Detailed documentation

8Man documents all activities providing you with unlimited opportunity to create reports on specific criteria such as user, date, time and file type. For example, who had access to particular documents at which time and on what date?

---

8 good reasons to use 8Man.

We're here to help you.

## 8Man – User-friendly functions across all scenarios

### Drilling down

#### Be in control of access rights management

Whether it's for quality management or financial audit purposes: Questions regularly arise concerning access rights. With only a few clicks 8Man can easily answer these. Individual users, group structures and inherited rights from previous users are all accessible. Exporting the results is straightforward and then it's available for reuse via report format. You'll wonder how you managed without it!

### Play your joker

#### Temporary rights I

Some projects require extra help – this may mean bringing in a consultant. Like all other employees they need access to the relevant data. Once the project is completed, who takes care of removing this person's access rights? This may also apply to employees who are working temporarily on specific projects. Or to employees who have since left the company. It's a logistical nightmare and one which can cause companies significant problems.

8Man allows you to administer temporary access rights effortlessly. When the time has come, the rights are revoked and your data is protected. A much more efficient use of time for you.

#### System Requirements:

##### Application server

- > Quad-Core-CPU
- > Microsoft Server 2003/2008 with .net Framework 3.5 SP1
- > 4 GB RAM, 200 MB HDD

##### Database

- > MS SQL Server 2005/2008 (Express/Standard)

##### Management Console

- > Windows XP SP3, Vista, Windows 7
- > .net Framework 3.5 SP1
- > 2GB RAM, 200 MB HDD
- > min. 1280 \* 1024 screen resolution

#### Supported Languages:

- > German > English > Russian

### School's out

#### Temporary rights II

Trainees often spend time in various departments within the company. This allows them to gain a quick overview of how the company works. All good, but the problem is that trainees need access rights for each department. One month in accounting, the next in the purchasing department and then suddenly posted to the other side of the country in a sales job. Before you know it, a trainee has as many access rights as one of the system administrators! With 8Man you can set a time limit on access rights and revise them if necessary, but always with the peace of mind that the trainee won't end up with more access rights than they should have.

### Click to copy

#### Comparing access rights

Hiring new employees, organizational change and so forth... the same question will be asked each time - which access rights are required? Usually it's sufficient to compare the access rights of employees who already work in the respective area and duplicate them for the new user. 8Man helps you to compare two users and make any required adjustments. Directory comparison is just as easy.

#### Application compatibility:

##### 8Man can be used with the following systems:

- Windows Server 2003, 2008, 2008 R2, (Cluster)
- Windows Active Directory 2003, 2008, 2008 R2
- NetApp Filer (Cifs)
- Open\_E (SMB)
